

## TransGrid's Tomago to Stroud Project Public Information Sessions

TransGrid is proposing to construct 6km of new transmission lines between Tomago and Tarro and replace 65km of existing wood pole power line between Tarro and Stroud Road with a higher capacity concrete pole power line.

Maximum demand in the region is forecast to rise by as much as 35% over the next 10 years. The proposed upgrade will help meet growing demand and provide a more secure and efficient power supply.

TransGrid representatives will be available at the following public information sessions, to answer questions and to provide further information.

### **Information Sessions**
