

Pollution Incident Response Management Plan - Transportation of Waste

Summary

The purpose of this document is to outline how the risk of a pollution incident will be minimised and controlled, and the actions to be taken immediately following a pollution incident to manage the incident for waste transported under Environmental Protection Licence 7153.

Document Control

Revision no:	2	HP TRIM No:	D2013/01039	Approval/ Reviewed date:	12 October 2017
Business process:	Manage Health, Safety & Environment			Document type:	Corporate-wide procedure
Process owner:	Manager/Health, Safety and Environment				
Author:	Megan Calvert, HSE Systems Manager				
Reviewers:	Luke Fania, Environmental Team Leader David Donehue, Corporate Environment Manager				
Approver:	Ken McCall, Manager/Health, Safety and Environment

1. Purpose

The purpose of this Pollution Incident Response Management Plan (PIRMP) is to:

- Outline how the risk of a pollution incident will be minimised and controlled through the development of planned actions to minimise and manage those risks;
- Outline the actions to be taken immediately following a pollution incident to manage the incident; and
- Document the incident notification protocol to ensure comprehensive and timely communication about a pollution incident is provided to relevant authorities/stakeholders.

2. Scope

This document applies to any TransGrid staff or contractor who is transporting trackable waste, including polychlorinated biphenyls (PCBs).

3. Definitions

Term	Definition
CREMP	Corporate Emergency Response Plan
PIMRP	Pollution Incident Response Management Plan
SDS	Safety Data Sheet
WARA	Work Activity Risk Assessment

4. Background

The Protection of the Environment Operations Act 1997 (POEO Act) requires the holder of an Environment Protection Licence (EPL) to prepare, keep, test and implement a Pollution Incident Response Management Plan (PIRMP).

TransGrid holds EPL 7153 for the transport of trackable waste and consequently is required to prepare, keep, test and implement a PIRMP.

TransGrid's Corporate Environment Manager is ultimately responsible for preparing, keeping, testing and implementation of the PIRMP.

This PIRMP has been prepared in accordance with:

- > Part 5.7A of the POEO Act;
- > Part 3A of the POEO (General) Regulation 2009; and
- > The EPA's Environmental Guidelines: Preparation of Pollution Incident Response Management Plan 2012.

4.1 Relationship with Other Documents

An Incident Notification Protocol has been developed to summarise the process for notifying the relevant authorities during a pollution incident with a risk of material harm (refer Section 9 and Attachment 1). This should be read in conjunction with the Corporate Emergency Management Plan (CREMP) which outlines broader stakeholder notification responsibilities.

Warning: A printed copy of this document may not be the current version. Please refer to the Wire to verify the current version.

Requirements for the transport and management of oil waste, including PCB contaminated waste, are identified in TransGrid's procedure, Waste Management. This PIRMP is consistent with the requirements outlined in the waste management procedure.

4.2 Regulatory Requirements

Table 4-1 lists information mandated under Section 153C of the POEO Act and clause 98C of the POEO (General) Regulation 2009 and details where this information is located in this document.

Table 4-1 POEO (General) Regulation 2009 requirements and detail within the PIRMP

Section 98 C	Detail required	Location in document
(a)	(2) Trackable waste transporters Subclause (1) does not apply in relation to a licence to the extent that the licence authorises the transport of trackable waste as referred to in clause 48 of Schedule 1 to the Act. In the case of such a licence, the matters required under section 153C (d) of the Act to be included in a plan relating to the transport of trackable waste are as follows: the names, positions and 24-hour contact details of those key individuals who: (i) are responsible for activating the plan, and (ii) are authorised to notify relevant authorities under section 148 of the Act, and (iii) are responsible for managing the response to a pollution incident,	Section 6 Section 9 and Attachment 1
(b)	the contact details of each relevant authority referred to in section 148 of the Act,	Section 6
(c)	a community engagement protocol that includes procedures for notifying people living or working in the vicinity of a pollution incident and keeping them informed of relevant matters,	Section 10
(d)	details of the pre-emptive action to be taken to minimise or prevent any risk of harm to human health or the environment arising out of that activity (including, as a minimum, action that complies with the requirements set out in clause 49 of the <i>Protection of the Environment Operations (Waste) Regulation 2014</i>),	Section 7
(e)	the nature and objectives of any staff training program in relation to the plan,	Section 11
(f)	the dates on which the plan has been tested and the name of the person who carried out the test,	Section 12
(g)	the manner in which the plan is to be tested and maintained.	Section 12

5. Overview of Activities

Historically, oil containing Polychlorinated Biphenyls (PCBs) was used to insulate transformers and electrical equipment. More recently, this oil has been replaced with the gas sulphur hexafluoride (SF₆), and PCB contaminated material and waste is being progressively removed from TransGrid sites. Any decommissioned PCB waste is now stored in a licensed storage facility at the Sydney West Substation under EPL 7119. This PIRMP covers the transport of this PCB waste from TransGrid sites across NSW to the Sydney West Substation for storage prior to collection and disposal to a licensed waste facility.

Where more than 200 kg of waste oil is transported, then the driver or organisation responsible is required to be licensed under the POEO Act 1997. EPL 7153 licences the transport of category 1 and 2 trackable waste. All waste movements using these vehicles must be tracked and reported as per the licence conditions.

EPL 7153 relates to TransGrid's operations at six depots and numerous substations and switching stations across NSW. Waste may be transported from any TransGrid site to Wallgrove for storage and disposal. The six depots include:

Warning: A printed copy of this document may not be the current version. Please refer to the Wire to verify the current version.

- > Newcastle
- > Wallgrove
- > Yass
- > Orange
- > Tamworth
- > Wagga Wagga

Defined travel routes are not set and therefore an incident may take place along any transport route from a TransGrid depot/substation to the Sydney West Depot at Eastern Creek, Sydney.

The frequency of transport is dependent on operational factors of each TransGrid site including maintenance requirements and de-commissioning of equipment. In a year it is estimated that trackable waste is transported on less than 50 trips. The transport of waste is conducted during the day (6am to 7pm) on either one of the 15 designated vehicles or in a trailer attached to a TransGrid vehicle which meets the criteria identified in Section 7.3.

6. Contact Details

Table 6-1 summarises the names, position titles and 24 hour contact details of the key individuals responsible for managing incident response and notifying the relevant authorities. Refer also to the Incident Notification Protocol (Attachment 1) and TransGrid's *CREMP*.

Table 6-1 Emergency Contact Details

7. Pre-emptive Actions

TransGrid has implemented a number of pre-emptive measures to minimise or prevent risk of harm to human health or the environment arising from the transport of PCB oil and wet electrical equipment. These include standards and procedures, labelling, vehicle requirements and equipment, records attainment and retention, duties of the driver, training and adequate insurance.

7.1 Procedures

TransGrid has developed the following procedures related to transport of PCB oil and waste management which identify the controls implemented at each stage of work to reduce the likelihood of a pollution incident onsite:

- > Transport, Storage and Disposal of Polychlorinated Biphenyls (PCB)
- > Oil Management in Substations
- > Hazardous Substances and Dangerous Goods Storage and Transport
- > Inspection, Test, Licencing and Competency
- > Authorisation to Work
- > Waste Management
- > Work Instruction – Disposal of Scheduled PCB Oil
- > Work Instruction – Disposal of Non-scheduled PCB Oil
- > Work Instruction – Disposal of PCB Free Oil

The management of waste and transport of PCB material is discussed in [Waste Management](#) procedure, Transport, Storage and Disposal of PCBs and Oil Management in Substations.

TransGrid's intranet system 'The Wire' contains specific information regarding storage, environment, transport, collection, disposal, records, reporting and advice for all waste streams. The Transport, Storage and Disposal of PCBs guidance document identifies the following mitigation measures employed to reduce the likelihood of the event of a pollution incident, including:

- > Appropriate clean up material and equipment (such as absorbents, spades, open head drums and brooms) shall be readily available when handling and transporting PCB material and PCB waste.
- > PCB material and PCB waste may be conveyed on the premise and shall be carried out in a manner that prevents discharge of PCBs into the environment.
- > PCB material and PCB waste shall be transported by a TransGrid EPA Licensed vehicle, TransGrid vehicle which complies with the requirements of Section 7.3 or EPA licensed contractor to another TransGrid premise or to an owner/occupier of a premise who is licensed to receive PCB material and PCB waste.
- > Prior to any work involving the transport of oil, an assessment is performed and appropriate precautions and control measures are identified. This assessment shall be in accordance with the Environmental Authorisation Framework.

An Environmental Moderate Risk Checklist will document the relevant precautions and control measures for situations where the PCB material is transported, including the required waste tracking documentation.. In addition environmental controls shall be identified in Safe Work Method Statements (SWMS) or WARAs.

Transport of bulk oil in tanker trucks or IBC tanks is required to be undertaken in accordance with Hazardous Substances and Dangerous Goods – Storage and Transport, which sets out the requirements for transporting dangerous goods by road or rail to meet the Australian Dangerous Goods Code.

Warning: A printed copy of this document may not be the current version. Please refer to the Wire to verify the current version.

7.2 Labelling

Hazardous Substances and/or Dangerous Goods shall be labelled in accordance with the requirements of WHS Regulation 2012 and Labelling of Workplace Hazardous Chemicals Code of Practice (Safe Work Australia, December 2011).

The label must include:

1. the product identifier
2. the name, Australian address and business telephone number of either the manufacturer or importer
3. the identity and proportion disclosed, in accordance with Schedule 8 of the WHS Regulations, for each chemical ingredient
4. any hazard pictogram(s) consistent with the correct classification(s) of the chemical
5. any hazard statement(s), signal word and precautionary statement(s) that is consistent with the correct classification(s) of the chemical
6. any information about the hazards, first aid and emergency procedures relevant to the chemical, which are not otherwise included in the hazard statement or precautionary statement, and
7. the expiry date of the chemical, if applicable.

If the label is damaged or falls off it must be replaced.

Where a container is not labelled and the contents are unknown then this should be clearly marked on the container e.g. "Caution do not use – unknown substance" and isolated until the contents can be identified and properly labelled. Where contents cannot be identified, arrangements should be made by the relevant Environment Officer and/or the Corporate Environment Manager for the correct disposal of the product.

7.3 Vehicle Requirements and Equipment

Vehicles used to transport oils must be constructed and maintained so as to prevent the spillage of waste. Vehicles are to be equipped with a radio or mobile phone and be roadworthy and clean.

The following equipment must be carried on the vehicle when transporting oil in drums or oil-filled equipment:

- > Electric torch;
- > 1 x 204 litre wheeled garbage bin or equivalent to house the kit and retrieve a spill;
- > A supply of oil absorbing material (at least 2 bags of dri-sorb granules & 1 roll of oil absorbing mat) sufficient to contain a volume of oil at least equal to that of the largest container being carried;
- > 1 x shovel and 1 x rake;
- > Protective clothing including 2 x disposable overalls, 2 x overshoes/gumboots, 2 x PVC gloves, 2 x goggles or face shields;
- > 1 x dry chemical fire extinguisher;
- > Double sided road reflectors.

The following documentation must be carried in the vehicle transporting all trackable waste:

- > Emergency procedures guide holder which contains the transformer oil (eg: Nytro 10GBN) and Vehicle Fire emergency procedure guides and SDS;
- > A copy of EPL 7153 required to authorise the transport of the waste;
- > HB 76-2004: Dangerous Goods-Initial Emergency Response Guide, published by Standards Australia (the Standards Australia Guide) or a document setting out procedures to be followed in an emergency and containing all information from the Standards Australia Guide that relates to the type of waste being transported; and
- > A copy of this PIRMP.

7.4 Records

Copies of the External Goods Receipt, PCB test results, completed Waste Transport Certificate and Destruction Certificate are to be forwarded to and retained by the Substations Manager.

Warning: A printed copy of this document may not be the current version. Please refer to the Wire to verify the current version.

7.5 Duties of the Driver

Wastes must not be mixed or transported together on any vehicle used to transport waste. Liquid waste must not be mixed with other waste.

All equipment and hoses are to be empty of oil and all openings sealed before leaving site. An inspection is to be made by the driver to ensure that there is no possibility of leakage from equipment and drums during transport.

Vehicles must not be overloaded and the load shall be securely tied down and covered during transportation. No more than 4 drums shall be transported in a trailer and no more than 2 drums shall be transported in a utility.

In case of a vehicle breakdown the driver is to:

- > Operate flashing hazard lights or parking lights; and
- > Place double sided reflector signals in the appropriate positions (one placed 50 m to 150 m in front of the vehicle; one placed 50 m to 150 m to the rear and one beside the vehicle).

7.6 Training

Training shall be conducted for all employees involved in the storage, handling and use of hazardous chemicals/dangerous goods in accordance with TransGrid's Authorisation to Work Procedure.

Staff involved in the transport of hazardous chemicals/dangerous goods must receive training by a Registered Training Organisation (RTO) appropriate for the work they undertake. Licences are valid for 5 years.

7.7 Insurance and/or Contingency Funds

TransGrid has adequate insurance and/or contingency funds available to cover the costs of any clean up likely to result from incidents arising from transport of trackable waste under EPL 7153 including the recovery of costs by emergency response agencies and the EPA.

8. Actions to be Taken

There are two main pollution incidents that may require an immediate response with regards to the transportation of PCB waste equipment and oils:

1. Major spill/loss of containment; and
2. Fire.

8.1 Spill Response

In the event of an oil spill during transit, the control measures outlined in the procedure Transport, Storage and Disposal of PCBs, Section 9 shall be followed and include:

1. The Incident Notification Protocol (Attachment 1) shall be activated and the TransGrid Corporate Environment Manager or Manager, Maintenance Programs must be notified immediately. It shall also be reported using the electronic incident notification system as soon as practicable.
2. The Corporate Environment Manager (or delegate) shall advise or notify the NSW EPA immediately in any event of any potential or actual environmental harm.
3. PCB contaminated liquids shall be contained by using spill kits stored in the vehicle or other viable method. Oils and PCB contaminated materials are not permitted to flow into drains or waterways. Place used absorbent material in appropriately labelled drums.
4. If soil, sand, gravel, paving, etc., has been contaminated by a spill of PCB-contaminated oil, samples of the soil, sand, gravel, etc., and of the oil shall be tested to determine the appropriate method of disposal.
5. Any clothing (including aprons, gloves, overalls, wet weather gear, boots, mask filters, etc.) that comes in contact with PCB shall be treated as PCB waste and disposed of accordingly.

Warning: A printed copy of this document may not be the current version. Please refer to the Wire to verify the current version.

8.2 Fire Response

In the event of a fire within the vehicle during transit ensure personal safety and contact emergency services (000 or 112 on mobiles). Only attempt to use a fire extinguisher if the fire is small.

The Incident Notification Protocol (Attachment 1) shall be activated immediately and the TransGrid Corporate Environment Manager or Manager, Maintenance Programs must be notified as soon as possible. It shall also be reported using the electronic incident notification system as soon as practicable.

9. Notification

A pollution incident where there is a risk of 'material harm' (as defined by the POEO Act and reproduced in the Definitions section of this Plan) is required to be notified *immediately* to the EPA, Fire and Rescue NSW, SafeWork NSW, NSW Ministry of Health and local council.

An Incident Notification Protocol (Attachment 1) has been developed to summarise the process for notifying the relevant authorities for pollution incidents with a risk of material harm. The Incident Notification Protocol is designed to allow the driver of the vehicle to notify the appropriate TransGrid staff responsible for notifying the relevant authorities, while the driver responds to the incident. If the driver is unable to contact the appropriate TransGrid Managers it becomes his / her responsibility to notify the relevant authorities.

Once the Corporate Environment Manager, Manager, Maintenance Programs or Substations Manager has been notified, it is their responsibility to identify the nearest local council and NSW Ministry of Health Office. The NSW Ministry of Health office will be identified on the NSW Government Health webpage <http://www.health.nsw.gov.au/publichealth/infectious/phus.asp>. The contact details of all the NSW local councils are available on the NSW Division of Local Government webpage http://www.dlg.nsw.gov.au/dlg/dlghome/dlg_LocalGovDirectory.asp. If the driver is not able to contact the identified TransGrid Managers they must liaise with the emergency services to notify the relevant Health Unit using Attachment 1 and the relevant local council using Attachment 3.

For broader notification responsibilities (beyond the relevant authorities) refer to the *CREMP*. The *CREMP* shall be activated by the Substations Manager, Manager, Maintenance Programs or the Corporate Environment Manager. .

In the process of notifying the relevant authorities the following information must be communicated to each authority in accordance with the POEO Act (C 150) during pollution incidents causing or threatening material harm:

1. **The time, date, nature, duration and location of the incident,**
1. **The location of the place where pollution is occurring or is likely to occur,**
2. **The nature, the estimated quantity or volume and the concentration of any pollutants involved, if known,**
3. **The circumstances in which the incident occurred (including the cause of the incident, if known),**
4. **The action taken or proposed to be taken to deal with the incident and any resulting pollution or threatened pollution, if known,**
5. **Other information prescribed by the regulations**

The information required to be reported is only that information known to the person notifying the incident when the notification is given. If any of the above information is not known during initial notification but becomes known afterwards, that information must be forwarded to the relevant authorities.

Warning: A printed copy of this document may not be the current version. Please refer to the Wire to verify the current version.

10. Communicating with the Community

The driver's immediate responsibility is to mitigate the incident and activate the Incident Notification Protocol (Attachment 1) so that the relevant authorities can be notified by TransGrid. As such coordinating the notification of the affected community will be the responsibility of the Substations Manager, Manager, Maintenance Programs and Corporate Environment Manager, in coordination with emergency services personnel responsible for managing the response to the incident.

For a localised spill the immediate residents in the affected vicinity of the pollution incident may be notified by the driver or emergency services when given instruction from the relevant Substations Manager, Manager, Maintenance Programs or Corporate Environment Manager. For a larger incident, where identified as appropriate by the relevant Substations Manager, Manager, Maintenance Programs or Corporate Environment Manager, the wider community will be notified that an incident has occurred via local radio and/or television and/or the relevant local councils. Refer to Table 10-1 for a suggested list of radio and television agencies which may be notified by TransGrid depending on the location where the incident has occurred. Where an incident occurs outside of the Sydney Metropolitan Area not all stations provided in Table 10-1 may be transmitted over the affected area.

Table 10-1 Media contact numbers

Radio media	
ABC Radio	02 8333 2137
96.9 Nova	132 410
104.1 2day FM	13 10 60

Ethnic TV (UBI World TV)	02 9776 2222

Refer to section 3.5 of the *CREMP* for the delegation of stakeholder communication responsibilities during/following a pollution incident (other than those relating to notifying the relevant authorities).

11. Staff Training

Training should be provided to employees handling PCB material or PCB waste. This training should include risk assessment, spill-clean-up methods, incident management and use of PPE. Training will be organised by the Corporate Environment Manager.

In addition to training in incident response, staff handling PCB materials and wastes must be authorised in accordance with TransGrid's Authorisation to Work procedure to ensure staff and contractors are

Warning: A printed copy of this document may not be the current version. Please refer to the Wire to verify the current version.

appropriately instructed to carry out such work. In addition Toolbox talks and pre-work briefings will be carried out prior to handling PCB waste.

12. Testing of Plan

In accordance with the POEO (General) Regulation 2009 Clause 98E, the PIRMP will be routinely tested once every 12 months. This will be managed by the Corporate Environment Manager and will involve a practical exercise or drill of a pollution incident during the transit of trackable waste. The purpose of the testing is to ensure the PIRMP is up to date and capable of being implemented.

In addition the PIRMP will be tested within one month of a pollution incident occurring during the transport of trackable waste to assess, in light of that incident, whether the information included in the plan is accurate and up to date and the PIRMP is still capable of being implemented in a workable and effective manner.

A record of the PIRMP tests conducted will be maintained in HP TRIM including the dates the testing took place and the name of the staff members involved in the testing.

Updates of the PIRMP will be recorded on the PIRMP Revision Summary page.

13. Availability of Plan

A copy of the Transport PIRMP will accessible to all TransGrid employees on the Wire, and physically located in the control room at each depot, including:

- > Newcastle
- > Wallgrove
- > Yass
- > Orange
- > Tamworth
- > Wagga Wagga

In addition, all vehicles transporting waste under EPL 7153 will maintain a copy of the PIRMP in the vehicle to enable implementation of the plan in the event of a pollution incident threatening or causing material harm. The PIRMP shall be made available to an authorised officer of the EPA on request.

The Incident Notification Protocol (Attachment 1) and community communication strategy (Section 10) will be made available to the public via TransGrid's website within 14 days after it has been prepared and/or a copy made available (without charge) to any person who makes a written request for a copy.

14. Accountability

Title	Responsibilities and Accountabilities
Corporate Environment Manager	<ul style="list-style-type: none"> > Classification of unknown substances for disposal > Notification to the local council and NSW Ministry of Health if an incident occurs > Annual testing of this procedure > Update of this procedure
Works Delivery/Environment Officers	<ul style="list-style-type: none"> > Classification of unknown substances for disposal

Warning: A printed copy of this document may not be the current version. Please refer to the Wire to verify the current version.

Title	Responsibilities and Accountabilities
Substations Manager	> Retention of completed External Goods Receipts, PCB test results, completed Waste Transport Certificate and Destruction Certificate

15. Implementation

The following actions will be undertaken to support implementation of this procedure:

- Notified on HSE News and HSE Systems Monthly Update;
- Annual testing of this procedure.

16. Monitoring and review

This procedure will be tested annually, as required under Clause 98E of the Protection of the Environment Operations (General) Regulation 2009.

17. Change from previous version

Revision no	Approved by	Amendment
0	Michael Gatt, EGM/PS&CS	First Issue
1	Jeremy Roberts, Acting Manager/HSE	> Update of procedure to new template > Update of position titles, contact details and procedure titles
2	Ken McCall, Manager/Health, Safety and Environment	> Updating contact details and position titles > Updated reference to TransGrid procedures > Updating Attachment 2 contact details
