

# Transgrid's Environmental Management

## Overview

### 1. Introduction

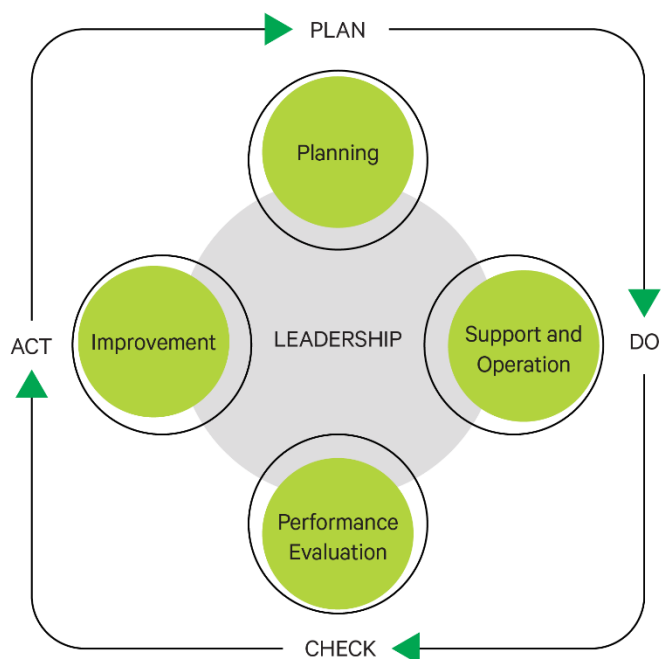

The protection of the environment is one of the fundamental values associated with all Transgrid activities. Working towards effectively integrating this value into our day-to-day business functions is essential to our long-term business success. Transgrid's approach to improved environmental management rests significantly with its staff members.

A focus on staff training and authorisation that provides staff with skills in the areas of environmental assessment and environmental protection have resulted in a range of checks and balances aimed at protecting the environment in which we operate.

In addition to these industry-leading initiatives, Transgrid's Environmental Management System (EMS) has been developed to identify and manage potential significant environmental impacts associated with our activities and services.

At an organisational level, our EMS involves:

- Planning to implement policy
- Implementing programs and procedures identified from the planning
- Monitoring performance
- Correcting problems
- Periodically reviewing the entire system.

This is a repeating cycle of plan, do, check and act.

The information contained within this document covers the key environmental programs and initiatives undertaken by the organisation, in addition to a range of useful links, documents, reports and resources.

## 2. Environment Policy

Transgrid have developed an Environmental Policy.

Transgrid is committed to conducting its activities and services in a manner that minimises pollution and complies with relevant legislation, industry standards and codes of practice.

Transgrid's EMS is certified under the international standard, ISO 14001:2015. An EMS is part of an organisation's management system used to develop and implement its environmental policy and manage its environmental aspects.

Transgrid's EMS has been designed to meet the commitments of its environment policy by identifying and assessing environmental risks, and where reasonable and practicable, implementing controls to avoid or limit these risks.

**ENVIRONMENT POLICY**  
Protect the environment, prevent pollution and comply

**Transgrid is committed to conducting its activities and services in a manner that protects the environment, prevents pollution and meets compliance obligations. Transgrid implores all employees and contractors to stop and consider the potential impact to the environment from their activities.**

The Environment Policy covers all activities and services undertaken by Transgrid including the planning, building and operation of infrastructure, ongoing management of these assets and their decommissioning.

We aim to enhance our systems and processes in a manner that promotes continuous improvement in environmental management and which will lead to the achievement of good industry practice.

In meeting these commitments, Transgrid:

- Maintains an Environmental Management System that provides the framework for setting and reviewing our environmental objectives and targets, including the implementation, monitoring and review of these objectives and targets, as well as facilitating continuous improvement in environmental performance
- Continues to develop systems that recognise sensitive environmental and cultural sites on or near our infrastructure, and provides processes to manage our activities with the aim of preventing environmental harm or adversely impacting the environment
- Integrates environmental management considerations into the planning, design, siting, construction, maintenance, operation, decommissioning and disposal of all Transgrid assets
- Provides environmental training, assessment and authorisation under our Environmental Management System to employees and contractors to enable them to perform their duties in an environmentally sensitive manner
- Engages with the community, customers, employees, government and other stakeholders regarding potential environmental or cultural impacts associated with our plans and activities
- Pursues opportunities to maximise resource efficiencies and reduce the generation of waste through reduction, reuse and recycling programs
- Identifies, sets and monitors realistic environmental performance measures and communicates them to all employees and stakeholders.

People. Power. Possibilities.

## 3. Significant environmental aspects

The significant environmental aspects were updated in 2018, as part of our two yearly review of the key environmental risks for the business. Transgrid's significant environmental aspects are:

- Failure of employee or Contractor to adhere to Conditions of Approval, legislative requirements or Environmental Assessment Framework during construction activities
- Insufficient clearing of easement (on easements) resulting in arcing and bushfire
- Off-easement trees causing significant bushfire
- Historical and legacy issues of inappropriate disposal and discovery of hazardous materials (PFAS, lead, asbestos).

## 4. Benefits of improved environmental performance

---

The benefits of improved environmental performance are:

- Minimise environmental impact
- Reduce waste
- Reduce energy costs
- Make the most of all available resources
- Improve corporate image, performance, and profit
- Improve compliance
- Increase employees' understanding of the importance of environmental concerns and the extent of their own, individual actions.

## 5. Managing environmental impacts

---

Transgrid has developed an Environmental Assessment Framework (EAF) to streamline the way we assess our activities. The framework replaced the old Environmental Rules procedures.

One of the key components of the EAF is the use of Environmental checklists for maintenance work activities. These checklists are used to assess the environmental impacts of Transgrid's exempt development activities.

Transgrid has developed an Environmental Handbook which helps you understand the ways you can mitigate your potential environmental impacts. There is also a suite of [environmental procedures](#) which set out processes for environmental management of key activities for the business.

## 6. Responsibilities and accountabilities

---

In our EMS we have developed a HSE RACI, which sets out the responsibilities and accountabilities for the business and environmental procedures which have specific responsibilities and accountabilities addressed.

As a minimum all workers must:

- Comply with the requirements in all relevant environmental documents related to their works.
- Speak up if you think an environmental document is missing or cannot be followed, something appears to be wrong, you are not sure what to do or something could be improved.
- Discuss environmental risks and hazards when performing the pre-work risk assessment (PWRA).
- Immediately report environmental incidents to your Team Leader/Manager.

All team leaders and managers must:

- Understand environmental risks and legal requirements relevant to your area of operations
- Check there are specific procedures and instructions for your workers to effectively manage environmental risks
- Ensure environmental documents are accessible to your workers
- Check your workers have adequate supervision, training and resources to comply with procedures and instructions
- Follow appropriate contingency plans for environmental emergencies
- Consider, and if appropriate, investigate all reported environmental concerns.

## 7. Importance of conforming to the requirements of the environmental management system

---

Conforming to the requirements of an EMS is important because they:

- help reduce an organisation's impact on the environment while improving operating efficiency.
- process, review, and improve an organisation's environmental goals, while analysing long-term and short-term environmental impact – as well as how the company is meeting legal requirements.
- create programs that will help the company meet targets and track and measure the results.
- improve employee awareness and competence in environmental issues.
- allow companies to continuously make improvements to their sustainability efforts.

## 8. Consequences of not meeting requirement of the EMS

---

Departing from the applicable EMS requirements can lead to the disciplinary process or for serious deviations, fines and penalties of up to \$5 million and/or seven years imprisonment.
