Project status

Transgrid ~~has~~ released a [Draft Corridor Report](#) ~~and is seeking~~ feedback from community and stakeholders.

~~Following requests from community members and landowners for additional time, Transgrid has extended the consultation period for five weeks until Friday, September 8.~~
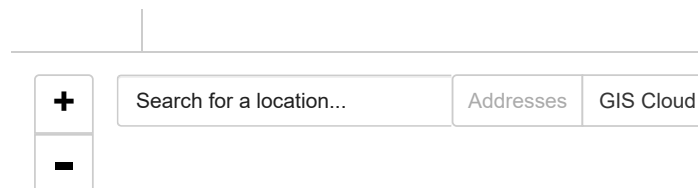

The Draft Corridor Report evaluates a number of potential corridor options, and identifies a preferred corridor. ~~The report is now on public display and community and stakeholders have the opportunity to view the report, ask questions and provide feedback on the preferred corridor option.~~

~~To submit your feedback please email the project team at~~ ~~vniw@transgrid.com.au~~.

~~This feedback will be considered when confirming the preferred corridor and once it has been determined,~~ the next stage will be to identify a route. A number of potential route options will be considered within the preferred corridor. This will involve detailed consultation with potentially impacted landholders before the environmental assessment phase.

This interactive map shows the preferred corridor for VNI West along with some of the key constraints considered during the preparation of the Draft Corridor Report. Constraint layers can be turned on or off using the map menu. This includes highly constrained areas which need to be avoided, along with additional technical, environmental and social constraints which have been considered.
Landholders can also search for their properties using the address search, or the map zoom function.
Note: this is not an exhaustive list of the constraints considered in the Draft Corridor Report.

Community Information Sessions

Thank you to all who attended the recent round of community information sessions in July – August 2023.

Transgrid is planning its next round of community information sessions for the VNI West project, with new dates to be published on this webpage. If you have any questions, please email vniw@transgrid.com.au.
