Consolidation of PSSR procedures

Audience: This notice is relevant to persons who carry out Field Operations; Issue or Work on Access Authorities; Bridge Earthing; or perform a Safety Observer role.

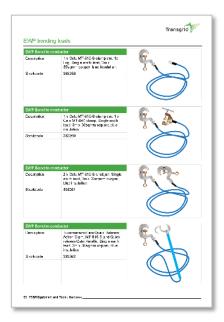

A new PSSR <u>Handbook – PSSR Equipment and Tools</u> has been developed to decrease the quantity of PSSR documentation and consolidate information from the following procedures:

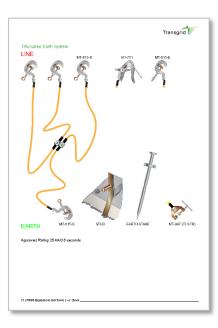

- Proving High Voltage Conductors De-energised
- Portable Earthing of High Voltage Conductors
- High Voltage Operating Rods

This is the final handbook to be developed as part of the PSSR v6.0 project, which now sees the total number of additional PSSR procedures reduced from over 25 in 2022 to just 12 today.

The Handbook details approved Power System Safety Rules equipment and tools used for Field Operations, Issuing and Work on Access Authorities, and other safe work requirements carried out on Transmission lines, Transmission Cables and at Substations.

PSSR Handbooks, forms and other documentation are readily accessed at https://www.transgrid.com.au/safety/workplace-safety/power-system-safety-rules
